

## **Making a USB copy of a video clip from a Hikvision DVR with the new firmware.**

- (1) Insert a USB stick into the back of the DVR. Not all units allow you to use the front USB plug to copy video.
- (2) Right click the mouse pointer anywhere on the Live View screens and draw your pattern to enter the Menu if requested.
- (3) Left Click the House Icon in the upper left of the screen. It is MENU.
- (4) Click PLAYBACK
- (5) Click to Select a Camera by left clicking in the check box to make a Check appear.
- (6) Click to Select a Date with a video file.
- (7) Review the video and note the beginning and end times of the needed video clip.
- (8) Click on the Scissor icon (Clip)
- (9) Move the start and end brackets [ ] on the colored line below the video to the correct time points for your needed clip.
- (10) Click the Disk icon (Export Clip)
- (11) Make sure the Video and Log line is selected and Click (OK)
- (12) Now make sure (Default or MP4) is selected and also the USB Flash Disk is listed in the Device Name field and click (OK)
- (13) Wait for the copy to finish writing on the USB Stick. There might be a red flashing light on the front of the DVR to indicate the writing process is in progress.
- (14) Once the copy is finished Click the Disk icon (Export Clip) again.
- (15) This time select (Player) and click (OK)
- (16) Make sure the USB Flask Disk is listed in the Device Name field and click (OK) again.
- (17) Once the Player is finished being exported to the stick you can remove it and take it to a computer and check the video file using the Player Application to view the video.
- (18) Run the Player.exe Application and once it opens select (File) in the upper left corner.
- (19) Select (Open)
- (20) Find the Video File on the USB stick you want to play and Highlight it and Select (Open).
