General Setup Instructions for a Wireless Access Point

1.Determine the Default IP address of the Wireless Access Point. Example 192.168.1.20 (This is generally packaged with the unit.)

2. A laptop computer will be needed for the following steps:

3. On the laptop computer LEFT CLICK the Start Menu.

4. Go to the CONTROL PANEL.

5. Double click on the NETWORK CONNECTIONS.

6. Click the PROPERTIES button.

7. A window will open. Highlight the Internet Protocol: (TCP/IP).

8. Next click the Properties Button.

9. Select "Use the Following IP Address:"

10. Set the IP address to: 192.168.1.1 (This number must be smaller than that of the Wireless Access Point.)

11. Set the Subnet mask to: 255.255.255.0

12. Click OK.

13. Close "Local Area Connection" Box.

14. Close out of the Control Panel.

15. Connect the Laptop to the Wireless Access Point via an ethernet cable.

16.Turn off the wireless transmitter in your laptop. (Important for making sure you are using the wired connection.)

17. Next open Internet Explorer and type into the address line: 192.168.1.20

18.You should next see a window asking for the username and password.

19. Enter username and password for the Wireless Access Point.

20. For further operation instructions please see refer to the user manual that came with the product or visit the manufacturers website.
